Saltwater Disposal (SWD)

SWD Construction

SWD Operations

Water Treatment & Filtration

Testing and Monitoring

Current Project

Greentree is currently expanding its commercial saltwater disposal business into the prolific Bakken Shale of North Dakota. We are currently working with the North Dakota Industrial Commission to get our wells permitted and facilities operational as quickly as possible. We are looking forward to servicing the needs of XTO, Continental, EOG, Whiting and several other major operators in the play.

News

We are very excited to announce that we have formed a strategic alliance with a transport company in North Dakota with a fleet of 100+ water trucks. This is a major accomplishment for our new swd expansion into the State.

Greentree Products

Greentree along with its partners own and operate multiple commercial class II saltwater disposal facilities and is currently in the process of permitting and installing new treatment and disposal facilities to service the rapidly growing Eagle Ford Shale in South Texas and the Bakken Shale in North Dakota.

Commercial Saltwater Disposal

Wells in the Eagle Ford and Bakken not only produce large volumes of oil and gas but also significant amounts of water throughout the lifespan of a well. Producers remove the water in trucks for proper disposal in nearby State approved facilities. Greentree's commercial facilities are approved for 10,000+ barrels of water per day at our various sites.

Frac Flowback Water Treatment/Disposal

Current shale well completions require the injection of millions of gallons of water, sand and chemicals in order to fracture stimulate the tight formations and permit the flow of hydrocarbons. A large portion of this water returns to the surface as a by-product or waste stream and must be disposed of properly or treated for resale. The estimated water disposal market for the Eagle Ford Shale is \$500-800MM with a 10 year potential of \$6-9 billion. This represents an enormous opportunity for Greentree and our partners to capitalize on the increasing demand for commercial disposal and treatment facilities.

Investment Opportunities

Contact us if you would like more information on how you can not only profit but also reduce your tax liability from participating in our upcoming commercial saltwater disposal and treatment facilities we are installing in the prolific Bakken Shale of North Dakota.
